Medical Drug Lists

Manage & Distribute Medical Pharmacy Coverage Data Across Members, Providers & Internal Teams

The U.S. pharmaceutical industry is characterized by a complex and often opaque system of drug distribution and reimbursement. With an increase in specialty drugs being approved by the FDA for targeted therapies and growing medical pharmacy drug spend, providers struggle with how to bill medical pharmacy drugs. Payers need more tools to more consistently manage this nuanced trend going forward. However, these tools and processes are often underdeveloped and this massive task falls on pharmacy teams who are attempting to solve this today through manual work.

Medical Drug List is an extension of MMIT's Navigator workflow functionality that leverages crosswalk data through RJ Health. By combining MMIT's industry-leading pharmacy benefit management tool for payers with RJ Health's deep domain experience in the medical benefit arena, Medical Drug Lists is designed to solve a previously unmet need.

The Industry Standard for Managing Medical & Pharmacy Drug Spend

Use Medical Drug Lists to:

› Manage medical drug lists by HCPCS code in a centralized workflow tool to stay current with drug compendiums & procedural codes
› Communicate medical coverage with links to policies for use by providers, members and internal teams
› Keep source documentation and drug coverage in sync with a more efficient workflow
› Eliminate manual work being done to manage medical drug coverage today
› Enable more accurate medical claims outcomes by integrating coverage and claims data with leading NDC crosswalk
